Recombinant *Mycobacterium tuberculosis* Ag85B

REP0025 - REP0026
50µg - 100µg

Description	The 30kD-secretory protein antigen 85B (Ag85B) is the most abundant protein exposed by <i>Mycobacterium tuberculosis</i> acting as a potent immunoprotective antigen. Ag85B induces a strong T-cell proliferation and the IFN- γ secretion in most healthy individuals exposed to <i>M. tuberculosis</i> , in BCG-vaccinated mice and humans. It has been shown that antibodies against Ag85B are more prevalent in active tuberculosis patients with decreased cellular immune response.
Product type	Recombinant protein
Peptide	<i>Mycobacterium tuberculosis</i> Ag85B amino acid sequences - Accession Number: P9WQP0.1
Expression system	<i>Escherichia coli</i>
Tested by	SDS-PAGE, Endotoxin assay
Purity	>90% pure estimated by SDS-PAGE (EU Ph. 5.0 § 2.5.31).

Purified recombinant antigen 85B protein (lane 1, molecular weight standard; lane 2, 5µg) was separated by SDS-PAGE (12% polyacrylamide) and stained with Coomassie Blue.

Form	Lyophilized. The protein should be reconstituted in aprotogenic sterile water or 1X PBS.
Storage buffer	-
Storage instructions	Shipped at room temperature. The lyophilized protein is stable for 24 months if stored at -20°C. The reconstituted solution must be used immediately.
